

The Arc of Human History: Challenges to Sustainability

A public seminar series sponsored by First Presbyterian Church of Urbana

Our species, *Homo sapiens*, has been sustained by planet Earth's eco-systems for over 200,000 years. Ongoing rapid accelerations in human population growth, technology and global affluence since the mid twentieth century, however, are inflicting detrimental effects on the Earth's ecosystems that are increasing the rate of extinction of species and imperiling the future of our own. This seminar series, which will be presented by University of Illinois experts, will describe these challenges to sustainability and ways to address them.

10 | 1

Journey of the Universe: Story of Cosmic, Earth and Human Transformation

A documentary film that is grounded in contemporary science and explores man's place in the universe. The film is a collaboration of evolutionary philosopher Brian Thomas Swimme, Professor in the Philosophy of Religion Program, California Institute of Integral Studies, and Mary Evelyn Tucker, Co-director of the Forum on Religion and Ecology, Yale University
